

# Basic Double Classroom Block

Classrooms are so overcrowded with up to 150 students in one class. The basic double classroom block is made of bricks with an iron sheet roof. It provides additional space for teaching and can replace old wooden and thatch structures. It is simple to build, very low-cost and will last for at least 25 years.

## Before - Wooden and thatch classrooms

## After - New bright basic classrooms - Children and teachers love them!

# Building a Double Classroom Block

We employ local builders and use local materials

## Why are classroom blocks needed?

- Rapidly increasing population.
- Not enough government resources means not enough classrooms.
- Up to 150 students per classroom.
- More classrooms needed to reduce class size.
- Provide more opportunities for students.
