

How are we empowering families like George and Kate's in northern Malawi?

Simple. The environment, education and healthcare projects we run and support go hand-in-hand. We use simple, low tech and innovative solutions and get amazing results, empowering Malawians to sustainably manage their natural resources, community by community by providing a hand UP, not a hand out.

• George is a fisherman. He has joined a **Fish Conservation Committee** and has been **educated and empowered** to look after the breeding areas and respect the fishing by-laws. By doing this George knows he'll be able to catch larger fish therefore able to **feed his family** and earn more money.

• Kate is part of a community **tree planting** group. She is also **saving existing trees**. Kate has a **Changu Changu Moto fuel efficient cookstove** which uses less wood so she only needs to collect one bundle of wood per week. Kate knows how to maintain her stove, and also knows the **health benefits** associated with the cook stove.

• Meg is attending Mwaya **primary school**, giving her the best chance to get a **secondary education** whilst Blev is attending one of Ripple Africa's **eight pre-schools**. Kate also attends our **adult literacy classes** at the **community library** so she can help her children with their school work.

• Kate takes Trifonia to our **Disabilities and Rehabilitation Project** as she was born with clubfoot. This project offers support to both Trifonia and Kate. As a family they all benefit from improved healthcare closer to their home thanks to Ripple Africa building a **health dispensary**.

Be part of making a difference. Visit www.rippleafrica.org and support these projects.
